ABOUT

.NET developer building APIs, automation systems, and data-driven platforms.

Designed and implemented a real-time load aggregation system (100+ users) that monitors multiple external platforms and delivers near real-time alerts via Telegram, eliminating manual multi-platform tracking. Experienced in distributed workflows, system integrations, and performance optimization.

EXPERIENCE

Senior .NET Developer

EBZ Group (via Proxify) — Remote | Apr 2025 – Present

- Designed reusable UI infrastructure for a microservices-based platform handling complex hierarchical datasets
- Implemented synchronized state across multiple data grids (filtering, sorting, layout), improving consistency and reducing redundant user actions
- Built flexible filtering components and optimized rendering performance for high-volume data scenarios
- Contributed to code quality and consistency through regular backend and frontend code reviews

.NET Backend Developer

Software Mind — Hybrid | Apr 2022 – Oct 2025

Bettech Gaming

- Developed APIs and integrated third-party services in a microservices architecture
- Resolved production issues in a live environment, improving system stability
- Optimized search performance using Elasticsearch
- Introduced observability (Datadog logging, tracing, alerting)

DataStation

- Migrated legacy ASP system to modern Blazor/.NET architecture
- Reverse-engineered undocumented logic and refactored into maintainable components
- Replaced stored procedures with EF-based queries, improving maintainability

Junior .NET Developer

STARLAB Moldova — On-site | Aug 2021 – Apr 2022

- Built backend endpoints and UI components for internal CRM and service systems

- Developed Blazor-based application for customer and payment management
- Improved system stability through bug fixing and iterative enhancements

Junior .NET Backend Developer

Extenda Retail (via Stefanini) — Remote | Apr 2020 – Aug 2021

- Implemented APIs for retail platform (POS, kiosks, warehouse systems)
- Improved performance of backend modules and database interactions
- Diagnosed and resolved production issues across distributed components

QA Engineer

Raymond James (via Allied Testing) — On-site | Jul 2018 – Mar 2020

- Validated data integrity during SQL Server → Oracle migration using complex SQL queries
- Identified inconsistencies across systems, ensuring accurate data transformation
- Tested trading workflows end-to-end, improving defect detection in critical flows

TECHNOLOGIES

Backend: C#, .NET, Web API, REST APIs, Entity Framework

Architecture: Microservices, distributed systems, DDD, Clean Architecture, SOLID, design patterns, message brokers (RabbitMQ)

Databases & Search: SQL Server / MSSQL, PostgreSQL, MongoDB, Redis, Elasticsearch

Cloud & DevOps: Azure, Docker, Kubernetes, Azure DevOps, GitHub, Git, CI/CD

Observability: Datadog, structured logging, tracing, alerting, production diagnostics

Frontend: Blazor, JavaScript, jQuery

EDUCATION

USM (State University of Moldova)

Bachelor degree in Computer Science (2014-2018)

LANGUAGES

English – Fluent

Romanian - Fluent

Russian - Native
